Lambda School is a full-time (40 hrs/wk), immersive Software Engineer & Computer Science Academy

A project-based curriculum where students pair program and complete weekly sprint challenges

Projects

Ventmode

Mar. 2020 to Current

Description: A web/mobile application that connects users with businesses and routes them to chosen business.

- Placed in charge of front-end side of the web application.
- Building all front-end component functionality and design while working closely with CEO.
- Cooperated with CEO to manage progress and overall composition of site.
- Revamped previous Angular site to work using React.
- Helped create proper communication between client and Firebase.
- Implemented Firebase authorization to function with Email, Google, Facebook and Twitter.

Sleepsta (Team of 6)

Mar. 2019 to Apr. 2019

Description: A mobile application that uses motion tracking to measure sleep. It also has a web application that allows the user to visualize their sleep habits online.

- Uses motion tracking to create data of sleep movement
- Utilized Redux to manage the store of the app
- Applied Styled-Components and Reactstrap for styling
- Implemented OAuth to handle login and user authorization
- Allows users to view sleep entries on iOS and web (in full detail)
- Tested and deployed front-end of website on Netlify, back-end hosted on Heroku
